

## • CHAIN LINK FENCE

We have established ourselves among the leading chain link fence manufacturer and chain link fence exporter . We can provide an exclusive range of chain link fences. Chain link fences used for different applications and because of the cost effectiveness and flexibility to use on any types terrain, it scores over traditional brick boundary wall. However, chain link fence can also be used to increase the height of the existing brick wall by topping it with chain link.

Depending upon the uses, one can choose chain link fence made of galvanized steel, polyvinyl chloride (PVC) coated. By paying a little premium over galvanized chain link fence, user can opt for PVC coated chain link fence which insure much longer life to the fence and thus saving on the repetitive cost of fence installation. PVC coated chain link fence is available in different color such as dark green, black, gray, etc. (depending upon availability of raw material).

## • APPLICATION

Chain link fence is used for various applications such as fencing of factories, farms, houses and animal enclosures, roof support, long wall mining, to provide fencing across border to security and effective indoor and outdoor protection around plants and machinery. It can also be used in test area to provide protection against flying objects yet permitting visibility of operation behind screen. Effective yet non-leather featcher make it useful to use it around playground, school, residential/commercial building, etc. chain link fence can also be topped mounted with lethal razor wires/ barbed wires to make it high security fence.
